

**pitch #ids\_and\_network**

## ID's and relation

Create personal and business and company identities.

To ease access to more services often using one click only.

# Summary

## **Execution summary:**

sign in system guiding towards many services using cloud, AI, delivery  
(eg integrating or using Alibaba)

## **startup description:**

Person signs up with private or business identity.

Then he/she can sign up easily for multiple services including but not limited to:

## identity types

- private
- business (you can add multiple people which use it)

## SERVICES:

- messenger (with AI bots)
- payments
- websites (with AI)
- video editing online/offline (with AI)
- send messages and rate by AI (spamming)
- CV / job applicant system (with AI)
- payment system

pitch #ids\_and\_network

- shop system (so products can target Alibaba ..)
  - teaching (with AI)
  - warehouses in each zip region (helping delivery and storage)
- > Alibaba could put stuff here to have faster delivery

targeting autonomous cars etc.

- contract system (with AI suggestions)
- second hand shop system (using AI)
- build my house suggestions (using AI)
- energy simulations of existing houses (using GPU)
- guide my carrier (using AI and databases)

pitch #ids\_and\_network

- data first cloud: data and derived contents disrupting github, software distribution, video editng, engineering and more.
- call center

# Market sizes

Service	Market Size (2025, USD Bn)	Est. Annual Server Costs (Startup, USD K)	Est. Annual Server Costs (Market Leader, USD Bn)
Messenger	136	15	30.2
Payments	170	20	17.1
Websites	2.5	5	0.8
Video Editing	2.4	4	2.4
Anti-Spam	9.6	2	146
CV/Job System	17.2	3	5.1
Shop System	10.5	5	1.2

## pitch #ids\_and\_network

Teaching	400	10	0.3
Warehouses	713	50	98.5
Contracts	33	5	0.7
Second-Hand Shop	475	10	2.8
House Suggestions	6.8	5	0.6
Energy Simulations	6.4	10	0.1
Career Guide	2.8	3	5.1
Data Cloud	161	20	39
SUM	2146.2	167	349.9

pitch #ids\_and\_network

Potential shops and products ?

<https://seo.ai/blog/how-many-shopify-stores-are-there>

## What is the network

Multiple businesses which seamlessly work together. Know each other and be happy to work together. So if a customer is happy the trust will be transferred to additional businesses which will in the end be the competitive advantage saving advertising costs building synergy effects

Figure 1: XX

## You always want to know who you are dealing with

And you get tired of repeating your own information. So this id service allows to register

- Personal identities
- Business identities

And allows to store preferences and descriptions so that you can use additional services (=THE NETWORK)

Figure 2: XX

# Identities

For each identity (private/business) briefly describe yourself. This information will be used to preseed additional services. Like get websites preconfigured by AI etc.

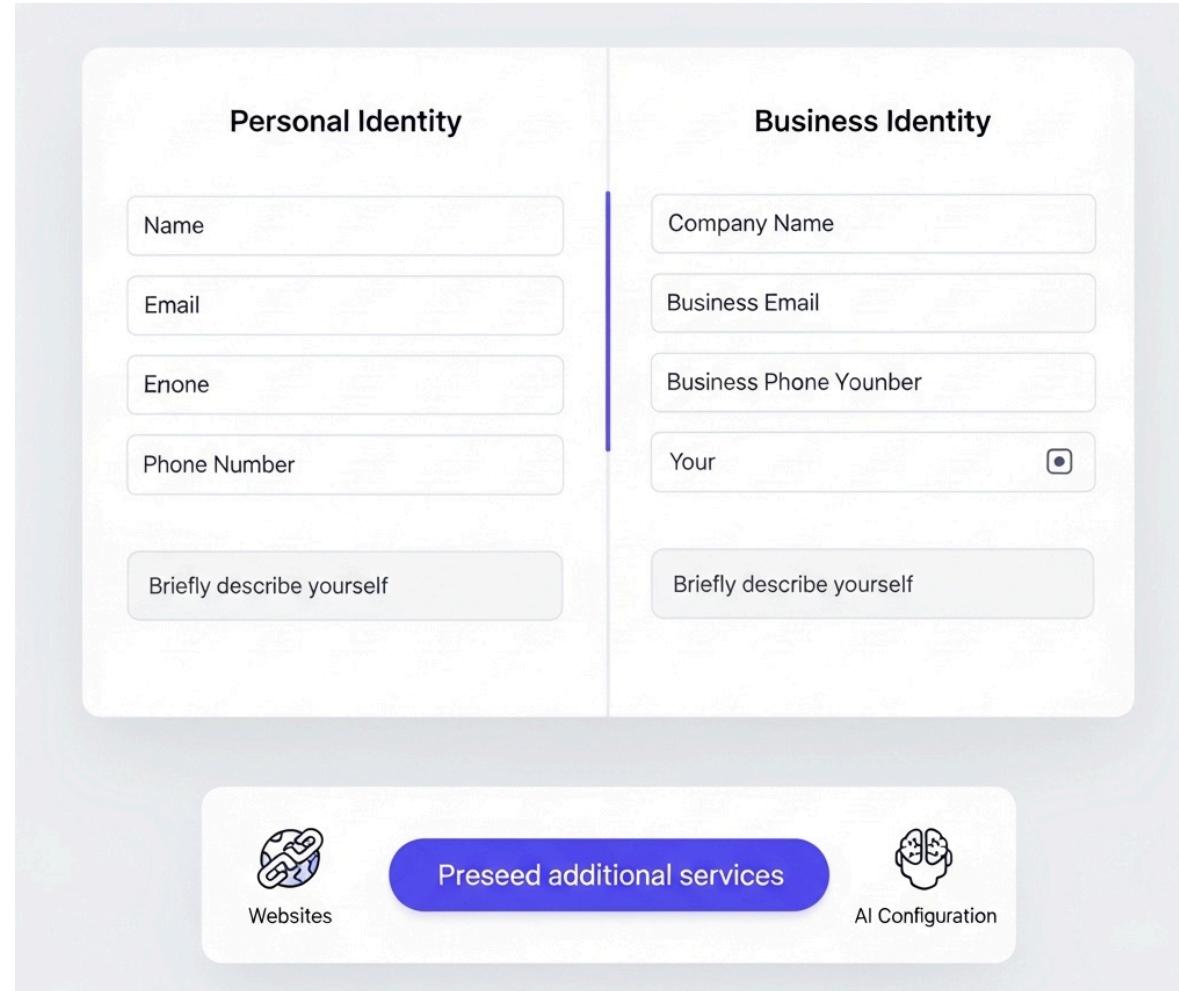

Figure 3: Personal and business identities!

## Preferences for the web/apps and online stores

Dark or light mode ? Color of website ? Style of website ? ... Preferred payment method ? Way you want to be spoken to (email/sms/whatsapp/ phone/robot) Style of newsletter you find most funny What kind of tax system you're using (Differenzbesteuerung Germany )prices might depend on it Video information density speed. Adjust videos automatically to your brain making you feel relaxed and comfortable.

pitch #ids\_and\_network

# CHAT

Identities can talk to each other like Whatsapp

## contract module

Like a blockchain but local to your identity you can have shared documents. If all parties sign its a contract. But its private to you. This includes updating delivery information or flight departure changes etc. Inquiry (do you have) Offer (choose one of ..) Sealed (we agreed upon this ...) Progress ( eg delivery ) I lent you a book (eg private ..)

# Marketing / reaching out / hitting on others

## Spam without being a spammer.

Define a profile: I like .. I dislike Then you can push voice text and video messages to others. AI will judge based on the profile and give a rating. If you cared about your profile only relevant cold or warm messages will be scored high. It's up to you to teach AI to categorize them further such as >eating< >books< whatever you like and want from this world ..

## UNIFORM WEBSITES

If you go shopping you love what you're used to most. So we will create websites which look the same for this reason to make it most simple for users to get the information not get lost. So you can preconfigure your websites based on your identity information so that only some adjustments might be enough to be up and running.

## Designer Website

Of course you can also just design whatever you want And put the burden to navigate your design on your user.

# E-Mails

Yes of course we support emails

## News feeds blog content short video

Upload whatever you want. And you can distribute your content on multiple targets: **Linked in** Whatsapp **Blog** Xml feeds **Podcasts** Facebook Our AI will assist in adopting your content to the many ways you can connect to users today

## Budgeted

Allow to create multiple accounts with budgets. Setup security protection you think makes sense. If you make 10 million its to send 500 USD without asking for a password 10 times a day. Now whenever you need a credit card you can generate new card on the fly with a budget set. So the other side gets hacked nothing happens. Sleep well no more worries.

Upload money and start business relations setting a hard limit on budgets and being able to cancel by clicking. Simple and same interface for all relationships. If budget is gone services will be halted. If possible

pitch #ids\_and\_network

some grace period is allowed to upload. So this means you can get an API key for 10+ AI providers without having to upload a credit card. Just hand over to your web dev and be done.

## **Warehousing and delivery / reusable bags**

Planning to put warehouses in every zip area so that people push and pull stuff easily and self driving cars can distribute things ..

Sending simple things like a capacitor is as easy as getting a bag scanning the QR code and having the app associate an address. Then you can wait for next delivery car or hand it in at the warehouse and delivery will take place. If you get something its your choice pick up at warehouse. Have a post man delivers it to you as fast as possible. Have a post car deliver within a day .. its your choice

## Appointment scheduling with marketplace

What if your appointment isn't that important to you but to somebody else ? So how about you telling >for 20 USD somebody else can have it<. So if somebody needs an appointment more urgent you make money.

## APIs for bots and shops

Whatever business you have such as selling stuff or services we'll build APIs so that bots and shop systems can use your services in a machine readable way. This will drive customers to you making it easiest.

pitch #ids\_and\_network

# Universal Contract Trust System

SCORE = MONEY \* HAPPINESS

## New ways of copy pasting

Allow to copy paste multiple informations using one copy paste command. login/password or credit card information number/expiration/CCV ...

pitch #ids\_and\_network

# CV

Yes, we can help you find a job by uploading your data to job platforms

# Job advertisements

If you need something to be done just describe and people will come and make offers.

## Short videos

Based on your preferences. You are what you consume. If you want fun switch on hat > I want fun < If you don't switch on a hat > knowledge only < And watch you what moves you ahead.

## Digital twins

Have digital twins of things which are important to you.

- Estate
- Your home

So you want to know what's behind your wall ? 3d technology allows to create a digital twin about what cables tubes whatever is where even if you can't see it so that you can plan change easiest.

## Video platform

Videos contain different densities of information Speaking speed  
Complexity of language So you understand your own level of alertness  
Videos can be adjusted to fit your comprehension speed Maybe we can  
even level up and let out pieces you already know

## Personal knowledge database

By combining what we learn from You by watching videos or reading information Combined with what you tell us We can help you avoid spending on time On what you already know. Like cutting out pieces of a video.

pitch #ids\_and\_network

# **dating**

Dating module for private people ?

## Follow news the smartest way possible

Tell us what news you're interested in. We'll send you follow ups. So escape the noise And spend your time on facts. The plane crashed because -> but it's irrelevant cause more people died from covid (if something is less important than covid death rate don't bother me!)

**Authorities are investigating why the plane crashed (not so valuable time sucking information because no result.)**

pitch #ids\_and\_network

**going to add whatever makes sense**

I guess this is just the beginning
